

> Manual

Schouten dashboard covers <

You can easily mount the dashboard covers yourself. This manual will guide you through the mounting process.

1. Clean the surface with enclosed cleaning set. Do not do this when the instruments are contained with a huge amount of cockpit spray. This must be removed with a degrease agent.
2. The temperature to mount the covers must be at least 15 degrees Celsius. Heat the surface with a hair dryer when the temperature is below 15 degrees.
3. Pull the cover of the paper.
4. Carefully place the cover carefully against the side and slightly push it on. Try to avoid contact with the sticky side.
5. The cover can be moved by carefully 'pull' it in the right direction.
6. Now heat the cover with an hair dryer.
7. Finally push the cover firm, especially at the sides.

Only when these steps are followed, we can guarantee an optimal stick contact of the dashboard covers.

For questions you can always contact us. Our sales managers and engineers can help you any time.
